

An economical shipping option for all seasons

CLIMATEMP

EFP's New Product Line for CRT Shipping

Climatemp uses pre-conditioned refrigerants, Gel Packs and Bricks, to control the temperatures of our shippers to stay between 20-25°C without deviation. These Phase Change Materials provide protection by absorbing energy during melting, releasing energy during solidification, while providing more mass to payload ratio to prevent thermal shock.

Product Details

- Seasonal packouts
- Economic CRT solutions
- Meets USP Guidelines
- Excursion analysis included

Product Specifications

Four pre-qualified solutions with fixed payload space and flexible temperature ranges:

- Duration at 20C – 25C (36 Hours)
- Duration at 15C – 30C (48 Hours)

- ▲ Gel Packs are made from 99% water and an inert water-absorbing polymer

- ▲ Gel Bricks keep their structure frozen or at ambient temperature
